It is important to recognize that the face of America is changing and so is every part of our way of life. Satellite radio is an amazing invention that helps not only everyday drivers in big cities, but also people in small towns. Yesterday as I was driving through New Albany Miss., I saw that XM satellite is heavily advertised and is extremely popular. The town with only one theater and a McDonalds relies on XM for service and clarity. It is through various innovations thanks to IBM, Microsoft, Apple, and other companies that great ideas and inventions formed a new mold of business, communication and way of life for this country. By limiting XM satellite radio you are limiting a society that is enftuated with technology and change. XM brings a new way of clear communication, why do the people have to listen to commercials, if we are willing to pay for commercial free radio time, don't you think we should have it, if we pay, that's the American theme, its the Golden rule, those who have the gold make the rules. This country says that 21 year olds can drink beer and 18 year olds can't, but at the same time that 18 year old can fight and defend his country and KILL a man in battle. Lets think of the issues at hand and come to a realization that XM satellite is a good thing for this country's economy and world advancement. Bush in 04, Howard Stern rules, beat those terrorists.
